From The Director

As a company we strive to offer outstanding service to all of our clients. From start to finish we follow these simple core values:

Safety, Reliability, Flexibility and Professionalism.

We feel that the industry has an inherent culture that lacks drive and ambition. By always striving to be the best at what we do, IC Pipes has already developed a brand that stands out from the crowd.

2013 is a big year for IC Pipes and we hope that you can be a part of our success.

- Luke Moore

CCTV Inspections and Mapping

- We specialise in state-of-the-art CCTV inspections of Storm Water pipes, Sewers, Culverts and everything else in between
- Starting at 150mm diameter, we can inspect any pipe up to 1500mm diameter
- Our Supervision system allows us to potentially inspect as far as 500m from a single entry hole
- Our Crawler system has interchangeable wheels, lighting, cameras and adjustable height which means we can access and inspect just about any pipe
- To record and present the footage captured, we use the latest in professional CCTV report capture software
- With the use of Mapinfo, we can utilise clients "compatible data systems" or start from scratch to create a whole new underground mapping package including asset information, locations of assets and much more
- With three CCTV units ready to hire, equipped with the latest technology IC Pipes are ready to meet your inspection needs

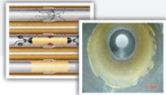

Envirosight Quick View®

- Complimenting our CCTV equipment, we have boosted our capabilities with the introduction of the Quick View manhole and pipeline survey camera
- Quick View is ideal for determining the overall condition of the line without the more time consuming conventional methods
- It helps our clients to then decide if further inspection is needed, thus saving on non-essential time and costs
- As with all of our CCTV equipment, the Quick View can produce highly detailed images and video footage

Pipeline Patch Repairs

- IC Pipes has been appointed as an official installer of the PatchBox spot repair system
- A unique system designed for individual spot repairs to damaged or deteriorated waste water piping
- Developed in the UK, fully Water Research Council (WRC) approved
- 50 year design life and guaranteed to withstand common waste chemicals
- Provides a structural repair

Drain Cleaning

- IC Pipes can offer a vast array of drain cleaning solutions to commercial and domestic applications
- With our fully maintained fleet of jet cleaning and Jet/Vac combination vehicles, we are ready to be deployed to planned and emergency reactive work
- Large obstructions or small debris are no problem for our 260 litre per minute jet units
- Up to 2000psi coupled with USB European jet nozzles, means just about any obstruction can be removed from sewers or storm water pipes
- Our combination units can hydro jet and vacuum debris from pipework
- Option to either stockpile at a location or remove the waste entirely
- Ability to vacuum material through a 6 inch pipe, removing it from up to 60 meters from the vehicle, and 20 meters vertically

Hydro - Excavation

- IC Pipes utilises its large drain cleaning units to perform hydro-excavation
- Due to the sheer volume of demand, the traditional potholing trucks are now obsolete
- Clients now demand the use of modern techniques which allow for hydro-trenching and deeper holes
- We understand this need, and have dedicated powerful hydro digging pumps to all of our jet/vac combination units
- Waste is no longer an issue with IC Pipes' ability to collect up to 8000 litres of hydro mud through a 6 inch vacuum port
- We provide the expertise to manage sludge on site, and we can offer storage and recycling options if needed

Microtraxx Culvert Cleaner

- For large culvert cleaning, IC Pipes can offer an alternative to jet cleaning
- The Microtraxx remote control loader removes 5 times more than conventional methods in the same amount of time
- It eliminates confined space entry and reduces manual labour time and costs, as well as other on site hazards

Other Services

- We pride ourselves on being able to offer a wider range of specialist services to our clients.
- Through our operating network, we can take on various additional services, such as:
 - On site water management and treatment
 - Sludge management
 - Excavation and associated equipment as required

Please contact us for further information about the services we offer and pricing.
